Turn-key Technologies, Inc. was incorporated in 1992 after nearly 30 years as a division of a world wide wireless communications company. Turn-key Technologies, Inc. specializes in the design and installation of large on-site paging systems and paging networks covering extended areas, wireless LAN infrastructure design, installation, optimization and support, and VoWiFi and stand-alone wireless telephony systems with alarm integration. The most recent addition to our product line is the TTI Guardian, a wireless duress and emergency notification system that incorporates personal duress alarms, mass notifications, acknowledged paging and man-down or no-movement alarms. Our emphasis is directed towards Healthcare, Department of Defense, State and Local Government, and Manufacturing where time critical communications are essential.

TTI has designed, installed and maintained over 1000 wireless systems throughout North America, as well as DoD installations in Qatar, South Korea and Japan. Our dedication to quality and customer service is evident with numerous customers having been with us for over 30 years. We maintain a large technical staff of both bench and field technicians to support our customers and provide the best possible service. 24/7 coverage is offered in order to insure any critical failures cause a minimum of down time. Additionally, our Help Desk is available 24 hours by 365 days a year to insure all service issues are resolved as quickly as possible.

TTI has been at the forefront of narrowband paging migration for the Federal Government. To date, we have performed over 120 narrowband transitions for such agencies as the Department of Defense, Department of Veterans Affairs, Department of Energy, Department of Health and Human Services, and USCENTCOM. Our experience in narrowband paging is evident in our ever increasing portfolio of successful transitions.

As our name implies, we provide full turn-key wireless solutions. TTI provides initial consultations, systems design, system build and testing, system installation, peripheral integrations, complete training and after sale service and support. In addition to our line of high quality paging terminals, transmitters and pagers, TTI is an Enterprise Solutions Partner for Aruba Networks, an industry leader for wireless LAN and security infrastructure, and a Gold Tier Partner for Ascom Wireless and their line of wireless telephony products.

When it comes to experience in wireless deployment, trust the company with nearly 40 years of experience; trust TTI Wireless.
